

## Annexe 2 : Table de la loi de Student

La table donne en fonction du paramètre **NU** (qu'on lit sur la première colonne)  $\alpha$  (qu'on lit sur la première ligne), la valeur  $t$  qui possède la probabilité  $p$  d'être dépassée en valeur absolue par une V.A.R. suivant une loi de Student de paramètre **NU** :  $F_{\chi_n^2}(\chi_{n;1-\alpha}^2) = 1 - \alpha$

Cette table donne les fractiles de la loi de Student à  $v$  degrés de liberté : valeur  $t$  ayant la probabilité  $\alpha$  d'être dépassée en valeur absolue :  $P(-t < T < t) = 1 - \alpha$ .  
Ou :  $P(T < -t) = \alpha/2 = P(T > t)$

|          |                        |
|----------|------------------------|
| $\alpha$ | $v$ (degré de liberté) |
